Subject Index

Aircraft Technology, Conventional, STOL/VTOL

Aerodynamics

Re-Engineering the Design Process Through Computation C99-004
Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 2 C99-006
Overview of Sensitivity Analysis and Shape Optimization for Complex Aerodynamic Configurations C99-008
Multidisciplinary Design and Proptotype Development of a Micro Air Vehicle C99-020
Reasonable Design Space Approach to Response Surface Approximation C99-028
Pneumatic Lift and Control Surface Technology for High Speed Civil Transports C99-030
Lifting-Line Theory for Arbitrarily Shaped Wings C99-031
Wake Integration for Three-Dimensional Flowfield Computations: Theoretical Development C99-033
Wake Integration for Three-Dimensional Flowfield Computations: Applications C99-034
Flow Computations Around Delta Wings Using Unstructured Hybrid Grids C99-035
Wing Jet Blowing on the Subsonic High Alpha Research Concept Fighter Configuration C99-040
Stall Resistance Features of Lifting-Body Airplane Configurations C99-049
Application of Active Separation Control to a Small Unmanned Air Vehicle C99-050
Inviscid Interactions Between Wake Vortices and Shear Layers C99-051
Particle Image Velocimetry Study of Wing-Tip Vortices C99-053
Gurney Flap Experiments on Airfoil and Wings C99-054
Flowfield Simulation About a 65-Degree Delta Wing During Constant Roll-Rate Motions C99-055
Nonlinear Response of Vortex Breakdown over a Pitching Delta Wing C99-057
Reduction of Fuselage Form Drag by Vortex Flows C99-058
Freestream Disturbance Effects on an Airfoil Pitching at Constant Rate C99-059
Lift Prediction of Spanwise Cambered Delta Wings C99-060
Rigid and Flexible Low Reynolds Number Airfoils C99-061
Unsteady Aerodynamic Characteristics of Airfoil with Moving Spoilers C99-062
Investigation of Confluent Boundary Layers in High-Lift Flows C99-064
Effects of Leading- and Trailing-Edge Gurney Flaps on a Delta Wing C99-081
Prediction of Vortex Breakdown in Leading-Edge Vortices Above Slender Delta Wings C99-082
Numerical Optimization of Fuselage Geometry to Modify Sonic-Boom Signature C99-083
V-Tail Stalling at Combined Angles of Attack and Sideslip C99-094
Prediction of Laminar/Turbulent Transition in Airfoil Flows C99-095
Hybrid Airfoil Design Procedure Validation for Full-Scale Ice Accretion Simulation C99-102
Simple Description of Airflow Characteristics Inside an Unfolding Parachute C99-107
Computational Investigation of Simulated Large-Droplet Ice Shapes on Airfoil Aerodynamics C99-110
Drag Reduction Due to Riblets on a GAW(2) Airfoil C99-116
Equivalence Between Sideslip and Roll in Wind-Tunnel Model Testing C99-118
Manual Aerodynamic Optimization of an Oblique Wing Supersonic Transport C99-122
Effects of Freestream Turbulence on Wing-Surface Flow and Aerodynamic Performance C99-130
Development of a Fully Systemized Chimera Methodology for Steady/Unsteady Problems C99-131
Large-Scale Parallel Unstructured Mesh Computations for Three-Dimensional High-Lift Analysis C99-133
Anti-Icing System Simulation Using CANICE C99-134
Effects of Wing-Tip Strakes on a Sheared-Tip Wing C99-141

Aeroelasticity and Aeroservoelasticity

Renaissance of Aeroelasticity and Its Future C99-010
Integrated Aeroservoelastic Optimization: Status and Direction C99-011
Reduced-Order Models for Integrated Aeroservoelastic Optimization C99-012
Aeroelastic Loads and Sensitivity Analysis for Structural Loads Optimization C99-013
Integrated Servostructural Optimization in the Design of Aerospace Systems C99-014
Model for Development of Backlash in Aircraft Control Circuit Mechanical Links C99-052
Divergence and Convergence of Iterative Static Aeroelastic Solutions C99-089
Nonlinear Equivalent Plate Modeling of Wing-Box Structures C99-112
Measurements of Unsteady Aeroelastic Model Deformation by Stereo Photogrammetry C99-138

Civil Missions and Transportation

Suboptimal Damped Periodic Cruise Trajectories for Hypersonic Flight C99-039

Communication and Air Traffic Control

Delay Exchanges in Arrival Sequencing and Scheduling C99-104

Configuration Design

Re-Engineering the Design Process Through Computation C99-004
Response Surface Models Combining Linear and Euler Aerodynamics for Supersonic Transport Design C99-007
Overview of Sensitivity Analysis and Shape Optimization for Complex Aerodynamic Configurations C99-008
Multidisciplinary Design and Proptotype Development of a Micro Air Vehicle C99-020
Statistical Approximations for Multidisciplinary Design Optimization: The Problem of Size C99-025
Framework for Multidisciplinary Design Based on Response-Surface Approximations C99-026
Robust Design Simulation: A Probabilistic Approach to Multidisciplinary Design C99-027
Reasonable Design Space Approach to Response Surface Approximation C99-028
Hybrid-Propulsion High-Altitude Long-Endurance Remotely Piloted Vehicle C99-029
Stall Resistance Features of Lifting-Body Airplane Configurations C99-049
Rigid and Flexible Low Reynolds Number Airfoils C99-061
Inverse Design of Supersonic Airfoils Using Integral Equations C99-072
Cost-Effective Multipoint Design of a Blended High-Speed Civil Transport C99-080
Numerical Optimization of Fuselage Geometry to Modify Sonic-Boom Signature C99-083
Hybrid Airfoil Design Procedure Validation for Full-Scale Ice Accretion Simulation C99-102
Influence of Separated Wing Flow on Tail Downwash of Low-Wing Pusher Configuration C99-121
Manual Aerodynamic Optimization of an Oblique Wing Supersonic Transport C99-122
Multipoint Inverse Design Method for Transonic Wings C99-127

Deceleration Systems

New Technique for Preventing Payload-Airbag Overtipping C99-073
Simple Description of Airflow Characteristics Inside an Unfolding Parachute C99-107

Flight Control Integration

Development of Low-Cost Differential Global Positioning System for Remotely Piloted Vehicles C99-077

Flight Mechanics

Multidisciplinary Design and Proptotype Development of a Micro Air Vehicle C99-020
Lifting-Line Theory for Arbitrarily Shaped Wings C99-031
Phugoid Approximation Revisited C99-047
Application of Active Separation Control to a Small Unmanned Air Vehicle C99-050
Boomerang Flight Mechanics: Unsteady Effects on Motion Characteristics C99-086
Best-Range Altitude for Jet-Propelled Aircraft C99-096
Method for Predicting the Rolling Resistance of Aircraft Tires in Dry Snow C99-101

Flight Operations

Mean Value Analysis of Military Airlift Operations at an Individual Airfield C99-099

General Aviation

Effects of Wing-Tip Strakes on a Sheared-Tip Wing C99-141

Landing Dynamics

Directional Stability and Control During Landing Rollout C99-068

Manufacturing

Combined Structural and Manufacturing Optimization of Stiffened Composite Panels C99-022

Military Missions

Overview of Low Observable Technology and Its Effects on Combat Aircraft Survivability C99-036
Decision Theoretical Approach to Pilot Simulation C99-079
Mean Value Analysis of Military Airlift Operations at an Individual Airfield C99-099

Noise

Design Minimization of Noise in Stiffened Cylinders Due to Tonal External Excitation C99-065
Trim and Floor Influence on Vibrational Response of an Aircraft Fuselage Model C99-069
Numerical Optimization of Fuselage Geometry to Modify Sonic-Boom Signature C99-083
Active Control of Structure-Borne and Airborne Sound Transmission Through Double Panel C99-137

Performance

Hybrid-Propulsion High-Altitude Long-Endurance Remotely Piloted Vehicle C99-029
Reduction of Fuselage Form Drag by Vortex Flows C99-058
Rigid and Flexible Low Reynolds Number Airfoils C99-061
Development of Low-Cost Differential Global Positioning System for Remotely Piloted Vehicles C99-077
Best-Range Altitude for Jet-Propelled Aircraft C99-096
Method for Predicting the Rolling Resistance of Aircraft Tires in Dry Snow C99-101

Propeller and Rotor Systems

Experimental and Theoretical Correlation of Helicopter Rotor Blade–Droop Stop Impacts C99-044
Wing Pitching and Loading with Propeller Interference C99-048

Safety

Method for Accelerating the Destruction of Aircraft Wake Vortices C99-038
V-Tail Stalling at Combined Angles of Attack and Sideslip C99-094
Prediction of Time-Correlated Gust Loads Using an Incremental Stochastic Search C99-105
Experimental Investigation of Simulated Large-Droplet Ice Shapes on Airfoil Aerodynamics C99-111

Simulation

Decision Theoretical Approach to Pilot Simulation C99-079
Boomerang Flight Mechanics: Unsteady Effects on Motion Characteristics C99-086
Optimization of Six-Degrees-of-Freedom Motion Systems for Flight Simulators C99-108

Stealth

Overview of Low Observable Technology and Its Effects on Combat Aircraft Survivability C99-036

STOL/VTOL/STOVL

Pneumatic Lift and Control Surface Technology for High Speed Civil Transports C99-030

Structural Design (Including Loads)

Structural Design Optimization Status and Direction C99-001
Structural Optimization with Thermal and Mechanical Constraints C99-003
Aeroelastic Loads and Sensitivity Analysis for Structural Loads Optimization C99-013
Reasonable Design Space Approach to Response Surface Approximation C99-028
Lifting-Line Theory for Arbitrarily Shaped Wings C99-031
Finite Element-Based Analytic Shape Sensitivities of Local and Global Airframe Buckling Constraints C99-087
Prediction of Time-Correlated Gust Loads Using an Incremental Stochastic Search C99-105
Wood to Metal: The Structural Origins of the Modern Airplane C99-123

Structural Materials

Wood to Metal: The Structural Origins of the Modern Airplane C99-123
Characterization of Fatigue Behavior of Bonded Composite Repairs C99-136

Testing, Flight and Ground

Turbulence Intensity Measurement Technique for Use in Icing Wind Tunnels C99-067
New Technique for Preventing Payload-Airbag Overtipping C99-073
Development of Low-Cost Differential Global Positioning System for Remotely Piloted Vehicles C99-077
In-Flight Skin Friction Measurements Using Oil Film Interferometry C99-092
Equivalence Between Sideslip and Roll in Wind-Tunnel Model Testing C99-118
Unified Model Deformation and Flow Transition Measurements C99-120
Estimating Aerodynamic Characteristics of Automatic Landing Flight Experiment Vehicle Using Flight Data C99-125
Transonic Similarity Theory Applied to a Supercritical Airfoil in Heavy Gas C99-129

Vibration

Selection of Sensor Locations for Active Vibration Control of Helicopter Fuselages C99-043
Trim and Floor Influence on Vibrational Response of an Aircraft Fuselage Model C99-069
Active Control of Structure-Borne and Airborne Sound Transmission Through Double Panel C99-137

Weather Hazards

Turbulence Intensity Measurement Technique for Use in Icing Wind Tunnels C99-067
Acceleration Effect on the Stanton Number for Castings of Ice-Roughened Surfaces C99-119
Anti-Icing System Simulation Using CANICE C99-134

Energy

Rotating Machinery

Statistical Approximations for Multidisciplinary Design Optimization: The Problem of Size C99-025

Fluid Dynamics

Aeroacoustics

Effects of Counterflow on the Aeroacoustic Properties of a Supersonic Jet C99-045

Boundary Layers and Heat Transfer—Turbulent

Investigation of Confluent Boundary Layers in High-Lift Flows C99-064
Acceleration Effect on the Stanton Number for Castings of Ice-Roughened Surfaces C99-119
Experimental Heat Transfer Coefficients from Ice-Roughened Surfaces for Aircraft Deicing Design C99-128

Boundary-Layer Stability and Transition

In-Flight Skin Friction Measurements Using Oil Film Interferometry C99-092
Prediction of Laminar/Turbulent Transition in Airfoil Flows C99-095
Effects of Freestream Turbulence on Wing-Surface Flow and Aerodynamic Performance C99-130

Computational Fluid Dynamics

Re-Engineering the Design Process Through Computation C99-004
Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 1 C99-005
Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 2 C99-006
Response Surface Models Combining Linear and Euler Aerodynamics for Supersonic Transport Design C99-007
Status and Future of Geometry Modeling and Grid Generation for Design and Optimization C99-009
Wake Integration for Three-Dimensional Flowfield Computations: Theoretical Development C99-033
Wake Integration for Three-Dimensional Flowfield Computations: Applications C99-034
Flow Computations Around Delta Wings Using Unstructured Hybrid Grids C99-035
Hopf-Bifurcation Analysis of Airfoil Flutter at Transonic Speeds C99-041
Wing Pitching and Loading with Propeller Interference C99-048
Flowfield Simulation About a 65-Degree Delta Wing During Constant Roll-Rate Motions C99-055
Investigation of Confluent Boundary Layers in High-Lift Flows C99-064
Inverse Design of Supersonic Airfoils Using Integral Equations C99-072
Improvement to Numerical Predictions of Aerodynamic Flows Using Experimental Data Assimilation C99-075
Computational Simulation of the F-22 Aircraft C99-076
Airfoil Drag Prediction and Decomposition C99-084
Spreadsheet Fluid Dynamics C99-091
Dynamic Unstructured Method for Relative Motion of Multibody Configuration at Hypersonic Speeds C99-093
Minimizing Computational Data Requirements for Multi-Element Airfoils Using Neural Networks C99-103
Multiple-Body Trajectory Calculations Using the Beggar Code C99-106
Simple Description of Airflow Characteristics Inside an Unfolding Parachute C99-107
Computational Investigation of Simulated Large-Droplet Ice Shapes on Airfoil Aerodynamics C99-110
Development of a Fully Systemized Chimera Methodology for Steady/Unsteady Problems C99-131
Large-Scale Parallel Unstructured Mesh Computations for Three-Dimensional High-Lift Analysis C99-133

Hypersonic Flow

Optimization of Waverider-Based Hypersonic Cruise Vehicles with Off-Design Considerations C99-021

Inlet, Nozzle, Diffuser, and Channel Flows

Optimization of Two-Dimensional Scramjet Inlets C99-042

Jets, Wakes, and Viscid-Inviscid Flow Interactions

Pneumatic Lift and Control Surface Technology for High Speed Civil Transports C99-030
Method for Accelerating the Destruction of Aircraft Wake Vortices C99-038
Effects of Counterflow on the Aeroacoustic Properties of a Supersonic Jet C99-045
Particle Image Velocimetry Study of Wing-Tip Vortices C99-053
Drag Reduction Due to Riblets on a GAW(2) Airfoil C99-116

Multiphase Flows

Turbulence Intensity Measurement Technique for Use in Icing Wind Tunnels C99-067

Separated Flows

Vortex Characteristics of Pitching Double-Delta Wings C99-032
Flow Computations Around Delta Wings Using Unstructured Hybrid Grids C99-035
Wing Jet Blowing on the Subsonic High Alpha Research Concept Fighter Configuration C99-040
Application of Active Separation Control to a Small Unmanned Air Vehicle C99-050
Time-History Effects on a Rolling 65-Degree Delta-Wing-Body Configuration C99-056
Reduction of Fuselage Form Drag by Vortex Flows C99-058
Lift Prediction of Spanwise Cambered Delta Wings C99-060
Unsteady Aerodynamic Characteristics of Airfoil with Moving Spoilers C99-062
Dynamic Stall of Pitching Airfoils and Delta Wings, Similarities and Differences C99-071
Computational Simulation of the F-22 Aircraft C99-076
Influence of Separated Wing Flow on Tail Downwash of Low-Wing Pusher Configuration C99-121
Effects of Freestream Turbulence on Wing-Surface Flow and Aerodynamic Performance C99-130

Subsonic Flow

Gurney Flap Experiments on Airfoil and Wings C99-054
Lift Prediction of Spanwise Cambered Delta Wings C99-060
Dynamic Stall of Pitching Airfoils and Delta Wings, Similarities and Differences C99-071
Application of the Subsonic Doublet Lattice Method to Delta Wings C99-074
Improvement to Numerical Predictions of Aerodynamic Flows Using Experimental Data Assimilation C99-075
Effects of Leading- and Trailing-Edge Gurney Flaps on a Delta Wing C99-081
Airfoil Drag Prediction and Decomposition C99-084
Spreadsheet Fluid Dynamics C99-091
Effects of Wing-Tip Strakes on a Sheared-Tip Wing C99-141

Supersonic Flow

Effects of Counterflow on the Aeroacoustic Properties of a Supersonic Jet C99-045
Manual Aerodynamic Optimization of an Oblique Wing Supersonic Transport C99-122

Transonic Flow

Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 1 C99-005
Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 2 C99-006
Hopf-Bifurcation Analysis of Airfoil Flutter at Transonic Speeds C99-041
Improvement to Numerical Predictions of Aerodynamic Flows Using Experimental Data Assimilation C99-075
Airfoil Drag Prediction and Decomposition C99-084
Multipoint Inverse Design Method for Transonic Wings C99-127
Transonic Similarity Theory Applied to a Supercritical Airfoil in Heavy Gas C99-129

Unsteady Flows

Vortex Characteristics of Pitching Double-Delta Wings C99-032
Time-History Effects on a Rolling 65-Degree Delta-Wing-Body Configuration C99-056
Nonlinear Response of Vortex Breakdown over a Pitching Delta Wing C99-057
Freestream Disturbance Effects on an Airfoil Pitching at Constant Rate C99-059
Unsteady Aerodynamic Characteristics of Airfoil with Moving Spoilers C99-062
Dynamic Stall of Pitching Airfoils and Delta Wings, Similarities and Differences C99-071
Application of the Subsonic Doublet Lattice Method to Delta Wings C99-074
Dynamic Unstructured Method for Relative Motion of Multibody Configuration at Hypersonic Speeds C99-093
Development of a Fully Systemized Chimera Methodology for Steady/Unsteady Problems C99-131

Vortices

Vortex Characteristics of Pitching Double-Delta Wings C99-032
Wake Integration for Three-Dimensional Flowfield Computations: Theoretical Development C99-033
Wake Integration for Three-Dimensional Flowfield Computations: Applications C99-034
Method for Accelerating the Destruction of Aircraft Wake Vortices C99-038
Inviscid Interactions Between Wake Vortices and Shear Layers C99-051
Particle Image Velocimetry Study of Wing-Tip Vortices C99-053
Flowfield Simulation About a 65-Degree Delta Wing During Constant Roll-Rate Motions C99-055
Time-History Effects on a Rolling 65-Degree Delta-Wing-Body Configuration C99-056
Nonlinear Response of Vortex Breakdown over a Pitching Delta Wing C99-057
Computational Simulation of the F-22 Aircraft C99-076
Effects of Leading- and Trailing-Edge Gurney Flaps on a Delta Wing C99-081
Prediction of Vortex Breakdown in Leading-Edge Vortices Above Slender Delta Wings C99-082

Guidance, Control, and Dynamics Technology

Aircraft Dynamics

Phugoid Approximation Revisited C99-047
Equivalence Between Sideslip and Roll in Wind-Tunnel Model Testing C99-118
Dynamic Thrust Offset Effects and Flying Qualities Implications C99-142

Aircraft Guidance

Suboptimal Damped Periodic Cruise Trajectories for Hypersonic Flight C99-039

Aircraft Stability and Control

Reduced-Order Models for Integrated Aeroservoelastic Optimization C99-012
Aeroelastic Loads and Sensitivity Analysis for Structural Loads Optimization C99-013
Flight Test of Optimal Inputs and Comparison with Conventional Inputs C99-037
Phugoid Approximation Revisited C99-047
Directional Stability and Control During Landing Rollout C99-068
V-Tail Stalling at Combined Angles of Attack and Sideslip C99-094
Dynamic Thrust Offset Effects and Flying Qualities Implications C99-142

Artificial Intelligence

Minimizing Computational Data Requirements for Multi-Element Airfoils Using Neural Networks C99-103

Flight Mechanics

Flight Test of Optimal Inputs and Comparison with Conventional Inputs C99-037

Handling Qualities

Directional Stability and Control During Landing Rollout C99-068
Optimization of Six-Degrees-of-Freedom Motion Systems for Flight Simulators C99-108
Influence of Separated Wing Flow on Tail Downwash of Low-Wing Pusher Configuration C99-121

Information Processing

Fault-Tolerant Neural Network Algorithm for Flush Air Data Sensing C99-063

Missile Dynamics

Multiple-Body Trajectory Calculations Using the Beggar Code C99-106

Optimization Techniques

Status and Future of Geometry Modeling and Grid Generation for Design and Optimization C99-009
Evolutionary Design of Controlled Structures C99-018
Multidisciplinary Conceptual Design Optimization of Space Transportation Systems C99-019
Optimization of Waverider-Based Hypersonic Cruise Vehicles with Off-Design Considerations C99-021
Nongradient Methods in Multidisciplinary Design Optimization—Status and Potential C99-023
Robust Design Simulation: A Probabilistic Approach to Multidisciplinary Design C99-027
Prediction of Time-Correlated Gust Loads Using an Incremental Stochastic Search C99-105

Redundancy Management

Fault-Tolerant Neural Network Algorithm for Flush Air Data Sensing C99-063

Signal Processing

Fault-Tolerant Neural Network Algorithm for Flush Air Data Sensing C99-063
Fault Tolerance and Extrapolation Stability of a Neural Network Air-Data Estimator C99-066

Structural Control

Selection of Sensor Locations for Active Vibration Control of Helicopter Fuselages C99-043

System Identification

Flight Test of Optimal Inputs and Comparison with Conventional Inputs C99-037
Estimating Aerodynamic Characteristics of Automatic Landing Flight Experiment Vehicle Using Flight Data C99-125

Trajectory Optimization

Suboptimal Damped Periodic Cruise Trajectories for Hypersonic Flight C99-039

Interdisciplinary Topics

Aerospace Management

Tools and Techniques for Decomposing and Managing Complex Design Projects C99-024

Aerospace Technology Utilization

Minimizing Computational Data Requirements for Multi-Element Airfoils Using Neural Networks C99-103

Analytical and Numerical Methods

Overview of Sensitivity Analysis and Shape Optimization for Complex Aerodynamic Configurations C99-008
Conceptual Spacecraft Design Using a Genetic Algorithm Trade Selection Process C99-017
Statistical Approximations for Multidisciplinary Design Optimization: The Problem of Size C99-025
Robust Design Simulation: A Probabilistic Approach to Multidisciplinary Design C99-027
Inviscid Interactions Between Wake Vortices and Shear Layers C99-051

Design Minimization of Noise in Stiffened Cylinders Due to Tonal External Excitation C99-065
Active Control of Structure-Borne and Airborne Sound Transmission Through Double Panel C99-137

CAD/CAM

Nongradient Methods in Multidisciplinary Design Optimization—Status and Potential C99-023
Framework for Multidisciplinary Design Based on Response-Surface Approximations C99-026

Human Factors

Optimization of Six-Degrees-of-Freedom Motion Systems for Flight Simulators C99-108

Reliability, Maintainability, and Logistics Support

Mean Value Analysis of Military Airlift Operations at an Individual Airfield C99-099

Research Facilities and Instrumentation

Unified Model Deformation and Flow Transition Measurements C99-120

Sensor Systems

Fault Tolerance and Extrapolation Stability of a Neural Network Air-Data Estimator C99-066

Launch Vehicle and Missile (LV/M) Technology

Aerodynamics

Multiple-Body Trajectory Calculations Using the Beggar Code C99-106

Configuration Design

Multidisciplinary Conceptual Design Optimization of Space Transportation Systems C99-019

Structural Design (Including Loads)

Structural Optimization with Thermal and Mechanical Constraints C99-003

Propulsion

Airbreathing Propulsion

Coupled Multidisciplinary Optimization of Engine Structural Performance C99-016
Optimization of Two-Dimensional Scramjet Inlets C99-042

Ramjets and Scramjets

Optimization of Waverider-Based Hypersonic Cruise Vehicles with Off-Design Considerations C99-021
Optimization of Two-Dimensional Scramjet Inlets C99-042

Space Technology

Mission Design and Analysis

Conceptual Spacecraft Design Using a Genetic Algorithm Trade Selection Process C99-017

Space Systems

Conceptual Spacecraft Design Using a Genetic Algorithm Trade Selection Process C99-017

Spacecraft Structural Configuration, Design, and Analysis

Evolutionary Design of Controlled Structures C99-018

Structural Mechanics and Materials

Aeroelasticity and Control

Renaissance of Aeroelasticity and Its Future C99-010
Integrated Aeroservoelastic Optimization: Status and Direction C99-011
Integrated Servostructural Optimization in the Design of Aerospace Systems C99-014
Hopf-Bifurcation Analysis of Airfoil Flutter at Transonic Speeds C99-041
Model for Development of Backlash in Aircraft Control Circuit Mechanical Links C99-052
Application of the Subsonic Doublet Lattice Method to Delta Wings C99-074
Divergence and Convergence of Iterative Static Aeroelastic Solutions C99-089
Comparison of Multidisciplinary Design Optimization Codes for Conceptual and Preliminary Wing Design C99-126
Aeroelastic Tailoring of Composite Structures C99-139

Dynamic Model Analysis

Full Validation of the Structural–Acoustic Response of a Simple Enclosure C99-113
Technique for Unique Optimization of Dynamic Finite Element Models C99-124

Flexible and Active Structures

Selection of Sensor Locations for Active Vibration Control of Helicopter Fuselages C99-043
Modal Characteristics of a Flexible Smart Plate Filled with Electrorheological Fluids C99-046

Structural Composite Materials

Combined Structural and Manufacturing Optimization of Stiffened Composite Panels C99-022
Structural Response of Composite Sandwich Panels Impacted With and Without Compression Loading C99-070
Review of the NASA Textile Composites Research C99-114
Parametric Study of the Behavior of Graphite/Epoxy Panels with Stiffener Terminations C99-140

Structural Design

Design-Oriented Analysis of Aircraft Fuselage Structures Using Equivalent Plate Methodology C99-002
Coupled Multidisciplinary Optimization of Engine Structural Performance C99-016
Structural Response of Composite Sandwich Panels Impacted With and Without Compression Loading C99-070
Wood to Metal: The Structural Origins of the Modern Airplane C99-123
Parametric Study of the Behavior of Graphite/Epoxy Panels with Stiffener Terminations C99-140

Structural Durability (Including Fatigue, Fracture, and Environmental Degradation)

Model for Development of Backlash in Aircraft Control Circuit Mechanical Links C99-052
Structural Response of Composite Sandwich Panels Impacted With and Without Compression Loading C99-070
Economic Life Determination for a Military Aircraft C99-097
Review of the NASA Textile Composites Research C99-114

Structural Dynamics and Characterization

Experimental and Theoretical Correlation of Helicopter Rotor Blade–Droop Stop Impacts C99-044
Modal Characteristics of a Flexible Smart Plate Filled with Electrorheological Fluids C99-046
Full Validation of the Structural–Acoustic Response of a Simple Enclosure C99-113
Technique for Unique Optimization of Dynamic Finite Element Models C99-124

Structural Finite Elements

Structural Design Optimization Status and Direction C99-001

Technique for Unique Optimization of Dynamic Finite Element Models C99-124

Structural Modeling

Design-Oriented Analysis of Aircraft Fuselage Structures Using Equivalent Plate Methodology C99-002
Full Validation of the Structural–Acoustic Response of a Simple Enclosure C99-113
Comparison of Multidisciplinary Design Optimization Codes for Conceptual and Preliminary Wing Design C99-126

Structural Optimization

Structural Design Optimization Status and Direction C99-001
Structural Optimization with Thermal and Mechanical Constraints C99-003
Status and Future of Geometry Modeling and Grid Generation for Design and Optimization C99-009
Integrated Aeroservoelastic Optimization: Status and Direction C99-011
Reduced-Order Models for Integrated Aeroservoelastic Optimization C99-012
Integrated Servostructural Optimization in the Design of Aerospace Systems C99-014
Coupled Multidisciplinary Optimization of Engine Structural Performance C99-016
Evolutionary Design of Controlled Structures C99-018
Combined Structural and Manufacturing Optimization of Stiffened Composite Panels C99-022
Nongradient Methods in Multidisciplinary Design Optimization—Status and Potential C99-023
Design Minimization of Noise in Stiffened Cylinders Due to Tonal External Excitation C99-065
Finite Element-Based Analytic Shape Sensitivities of Local and Global Airframe Buckling Constraints C99-087
Comparison of Multidisciplinary Design Optimization Codes for Conceptual and Preliminary Wing Design C99-126
Aeroelastic Tailoring of Composite Structures C99-139

Structural Stability

Finite Element-Based Analytic Shape Sensitivities of Local and Global Airframe Buckling Constraints C99-087

Thermophysics and Heat Transfer

Aerothermodynamics/Thermal Protection

Anti-Icing System Simulation Using CANICE C99-134

Forced Convection

Acceleration Effect on the Stanton Number for Castings of Ice-Roughened Surfaces C99-119
Experimental Heat Transfer Coefficients from Ice-Roughened Surfaces for Aircraft Deicing Design C99-128

Natural Convection

Spreadsheet Fluid Dynamics C99-091

Chronological Index

C99-001 Structural Design Optimization Status and Direction. G. N. Vanderplaats, *VMA Engineering* (**36**, 1, p. 11) Article based on AIAA Paper 97-1407 ISBN 1-56347-227-9

C99-002 Design-Oriented Analysis of Aircraft Fuselage Structures Using Equivalent Plate Methodology. Gary L. Giles, *NASA Langley Research Center* (**36**, 1, p. 21) Article

C99-003 Structural Optimization with Thermal and Mechanical Constraints. Suqiang Xu and Ramana V. Grandhi, *Wright State University* (**36**, 1, p. 29) Article

C99-004 Re-Engineering the Design Process Through Computation. Antony Jameson, *Princeton University* (**36**, 1, p. 36) Survey Paper based on AIAA Paper 97-0641

C99-005 Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 1. James J. Reuther, *NASA Ames Research Center*; Antony Jameson and Juan J. Alonso, *Stanford University*; and Mark J. Rimlinger and David Saunders, *NASA Ames Research Center* (**36**, 1, p. 51) Article

C99-006 Constrained Multipoint Aerodynamic Shape Optimization Using an Adjoint Formulation and Parallel Computers, Part 2. James J. Reuther, *NASA Ames Research Center*; Antony Jameson and Juan J. Alonso, *Stanford University*; and Mark J. Rimlinger and David Saunders, *NASA Ames Research Center* (**36**, 1, p. 61) Article

C99-007 Response Surface Models Combining Linear and Euler Aerodynamics for Supersonic Transport Design. Duane L. Knill, Anthony A. Giunta, Chuck A. Baker, Bernard Grossman, William H. Mason, Raphael T. Haftka, and Layne T. Watson, *Virginia Polytechnic Institute and State University* (**36**, 1, p. 75) Article

C99-008 Overview of Sensitivity Analysis and Shape Optimization for Complex Aerodynamic Configurations. James C. Newman III, *Mississippi State University*; Arthur C. Taylor III, *Old Dominion University*; Richard W. Barnwell, *Virginia Polytechnic Institute and State University*; Perry A. Newman, *NASA Langley Research Center*; and Gene J.-W. Hou, *Old Dominion University* (**36**, 1, p. 87) Article

C99-009 Status and Future of Geometry Modeling and Grid Generation for Design and Optimization. Jamshid A. Samareh, *NASA Langley Research Center* (**36**, 1, p. 97) Article

C99-010 Renaissance of Aeroelasticity and Its Future. Peretz P. Friedmann, *University of California, Los Angeles* (**36**, 1, p. 105) Survey Paper

C99-011 Integrated Aeroservoelastic Optimization: Status and Direction. Eli Livne, *University of Washington* (**36**, 1, p. 122) Survey Paper based on AIAA Paper 97-1409 ISBN 1-56347-227-9

C99-012 Reduced-Order Models for Integrated Aeroservoelastic Optimization. Moti Karpel, *Technion—Israel Institute of Technology* (**36**, 1, p. 146) Article

C99-013 Aeroelastic Loads and Sensitivity Analysis for Structural Loads Optimization. R. D'Vari and M. Baker, *The Boeing Company* (**36**, 1, p. 156) Article

C99-014 Integrated Servostructural Optimization in the Design of Aerospace Systems. G. Bindolino, S. Ricci, and P. Mantegazza, *Politecnico di Milano, Italy* (**36**, 1, p. 167) Article

C99-015 Recent Applications of Design Optimization to Rotorcraft—A Survey. Roberto Celi, *University of Maryland* (**36**, 1, p. 176) Survey Paper

C99-016 Coupled Multidisciplinary Optimization of Engine Structural Performance. Christos C. Chamis, *NASA Lewis Research Center* (**36**, 1, p. 190) Article

C99-017 Conceptual Spacecraft Design Using a Genetic Algorithm Trade Selection Process. Todd Mosher, *The Aerospace Corporation* (**36**, 1, p. 200) Article

C99-018 Evolutionary Design of Controlled Structures. Brett P. Masters and Edward F. Crawley, *Massachusetts Institute of Technology* (**36**, 1, p. 209) Article

C99-019 Multidisciplinary Conceptual Design Optimization of Space Transportation Systems. Lawrence F. Rowell and Robert D. Braun, *NASA Langley Research Center*; John R. Olds, *Georgia Institute of Technology*; and Resit Unal, *Old Dominion University* (**36**, 1, p. 218) Article

C99-020 Multidisciplinary Design and Proptotype Development of a Micro Air Vehicle. Masoud Rais-Rohani and George R. Hicks, *Mississippi State University* (**36**, 1, p. 227) Article

C99-021 Optimization of Waverider-Based Hypersonic Cruise Vehicles with Off-Design Considerations. Naruhisa Takashima and Mark J. Lewis, *University of Maryland* (**36**, 1, p. 235) Article

C99-022 Combined Structural and Manufacturing Optimization of Stiffened Composite Panels. Joseph Lynn Henderson, Zafer Gürdal, and Alfred C. Loos, *Virginia Polytechnic Institute and State University* (**36**, 1, p. 246) Article

C99-023 Nongradient Methods in Multidisciplinary Design Optimization—Status and Potential. Prabhat Hajela, *Rensselaer Polytechnic Institute* (**36**, 1, p. 255) Article

C99-024 Tools and Techniques for Decomposing and Managing Complex Design Projects. James L. Rogers, *NASA Langley Research Center* (**36**, 1, p. 266) Article

C99-025 Statistical Approximations for Multidisciplinary Design Optimization: The Problem of Size. Patrick N. Koch, *Engineous Software, Inc.*; and Timothy W. Simpson, Janet K. Allen, and Farrokh Mistree, *Georgia Institute of Technology* (**36**, 1, p. 275) Article

C99-026 Framework for Multidisciplinary Design Based on Response-Surface Approximations. Stephen M. Batill and Marc A. Stelmack, *University of Notre Dame*; and Richard S. Sellar, *The Summit Group, Inc.* (**36**, 1, p. 287) Article

C99-027 Robust Design Simulation: A Probabilistic Approach to Multidisciplinary Design. Dimitri N. Mavris, Oliver Bandte, and Daniel A. DeLaurentis, *Georgia Institute of Technology* (**36**, 1, p. 298) Article based on AIAA Paper 96-4090 ISBN 1-56347-218-X

C99-028 Reasonable Design Space Approach to Response Surface Approximation. Vladimir O. Balabanov, Antony A. Giunta,

Oleg Golovidov, Bernard Grossman, William H. Mason, and Layne T. Watson, *Virginia Polytechnic Institute and State University;* and Raphael T. Haftka, *University of Florida* (**36**, 1, p. 308) Article

C99-029 Hybrid-Propulsion High-Altitude Long-Endurance Remotely Piloted Vehicle. M. Harmats and D. Weihs, *Technion—Israel Institute of Technology* (**36**, 2, p. 321) Article

C99-030 Pneumatic Lift and Control Surface Technology for High Speed Civil Transports. Robert J. Englar, Curt S. Niebur, and Scott D. Gregory, *Georgia Tech Research Institute* (**36**, 2, p. 332) Article based on AIAA Paper 97-0036

C99-031 Lifting-Line Theory for Arbitrarily Shaped Wings. M. L. Rasmussen and D. E. Smith, *University of Oklahoma* (**36**, 2, p. 340) Article

C99-032 Vortex Characteristics of Pitching Double-Delta Wings. Lars E. Ericsson (**36**, 2, p. 349) Article based on AIAA Paper 97-3574 ISBN 1-56347-235-X

C99-033 Wake Integration for Three-Dimensional Flowfield Computations: Theoretical Development. Michael B. Giles, *Oxford University, England, UK;* and Russell M. Cummings, *California Polytechnic State University* (**36**, 2, p. 357) Article based on AIAA Paper 96-2482 ISBN 1-56347-212-0

C99-034 Wake Integration for Three-Dimensional Flowfield Computations: Applications. David L. Hunt, *Aircraft Research Association, England, UK;* Russell M. Cummings, *California Polytechnic State University;* and Michael B. Giles, *Oxford University, England, UK* (**36**, 2, p. 366) Article based on AIAA Paper 97-2257 ISBN 1-56347-232-5

C99-035 Flow Computations Around Delta Wings Using Unstructured Hybrid Grids. Shintaro Kano and Kazuhiro Nakahashi, *Tohoku University, Japan* (**36**, 2, p. 374) Article based on AIAA Paper 98-0232

C99-036 Overview of Low Observable Technology and Its Effects on Combat Aircraft Survivability. John Paterson, *Northrop Grumman Corporation* (**36**, 2, p. 380) Article

C99-037 Flight Test of Optimal Inputs and Comparison with Conventional Inputs. Eugene A. Morelli, *NASA Langley Research Center* (**36**, 2, p. 389) Article

C99-038 Method for Accelerating the Destruction of Aircraft Wake Vortices. Steven C. Rennich and Sanjiva K. Lele, *Stanford University* (**36**, 2, p. 398) Article based on AIAA Paper 98-0667

C99-039 Suboptimal Damped Periodic Cruise Trajectories for Hypersonic Flight. Lael vonEggers Rudd and Darryll J. Pines, *University of Maryland;* and Preston H. Carter II, *Lawrence Livermore National Laboratory* (**36**, 2, p. 405) Article

C99-040 Wing Jet Blowing on the Subsonic High Alpha Research Concept Fighter Configuration. Kevin J. Langan, *U.S. Air Force Research Laboratory;* and Jeffrey J. Samuels, *NASA Ames Research Center* (**36**, 2, p. 413) Article based on AIAA Paper 97-0039

C99-041 Hopf-Bifurcation Analysis of Airfoil Flutter at Transonic Speeds. Scott A. Morton and Philip S. Beran, *U.S. Air Force Institute of Technology* (**36**, 2, p. 421) Article

C99-042 Optimization of Two-Dimensional Scramjet Inlets. M. K. Smart, *NASA Langley Research Center* (**36**, 2, p. 430) Article

C99-043 Selection of Sensor Locations for Active Vibration Control of Helicopter Fuselages. C. Venkatesan and A. Udayasankar, *Indian Institute of Technology* (**36**, 2, p. 434) Article

C99-044 Experimental and Theoretical Correlation of Helicopter Rotor Blade–Droop Stop Impacts. Jonathan A. Keller and Edward C. Smith, *Pennsylvania State University* (**36**, 2, p. 443) Article

C99-045 Effects of Counterflow on the Aeroacoustic Properties of a Supersonic Jet. C. Shih, F. S. Alvi, and D. M. Washington, *Florida A&M University and Florida State University* (**36**, 2, p. 451) Article based on AIAA Paper 97-0149

C99-046 Modal Characteristics of a Flexible Smart Plate Filled with Electrorheological Fluids. Seung-Bok Choi, *Inha University, Korea;* Yong-Kun Park, *Myongji Junior College, Korea;* and Sang-Bong Jung, *Inha University, Korea* (**36**, 2, p. 458) Article

C99-047 Phugoid Approximation Revisited. S. Kamesh, *Aeronautical Development Agency, India;* and S. Pradeep, *Indian Institute of Science* (**36**, 2, p. 465) Engineering Note

C99-048 Wing Pitching and Loading with Propeller Interference. R. M. Ardito Marretta, G. Davi, and A. Milazzo, *Universitá degli Studi di Palermo, Italy;* and G. Lombardi, *Universitá degli Studi di Pisa, Italy* (**36**, 2, p. 468) Engineering Note

C99-049 Stall Resistance Features of Lifting-Body Airplane Configurations. Joseph Katz and Shaun Byrne, *San Diego State University;* and Robert Hahl, *Redwood Aircraft Corporation* (**36**, 2, p. 471) Engineering Note based on AIAA Paper 98-0760

C99-050 Application of Active Separation Control to a Small Unmanned Air Vehicle. A. Seifert, T. Bachar, and I. Wygnanski, *Tel-Aviv University, Israel;* and A. Kariv, H. Cohen, and R. Yoeli, *Aero Design and Development, Inc., Israel* (**36**, 2, p. 474) Engineering Note

C99-051 Inviscid Interactions Between Wake Vortices and Shear Layers. Z. C. Zheng and K. Baek, *University of South Alabama* (**36**, 2, p. 477) Engineering Note

C99-052 Model for Development of Backlash in Aircraft Control Circuit Mechanical Links. S. A. Safi, D. W. Kelly, and R. D. Archer, *University of New South Wales, Australia* (**36**, 2, p. 480) Engineering Note

C99-053 Particle Image Velocimetry Study of Wing-Tip Vortices. A. F. K. Yeung and B. H. K. Lee, *National Research Council, Canada* (**36**, 2, p. 482) Engineering Note

C99-054 Gurney Flap Experiments on Airfoil and Wings. C. P. van Dam and D. T. Yen, *University of California, Davis;* and P. M. H. W. Vijgen, *The Boeing Company* (**36**, 2, p. 484) Engineering Note

C99-055 Flowfield Simulation About a 65-Degree Delta Wing During Constant Roll-Rate Motions. Jeffrey C. Tromp, *U.S. Air Force Research Laboratory* (**36**, 2, p. 486) Engineering Note based on AIAA Paper 98-4453 ISBN 1-56347-270-8

C99-056 Time-History Effects on a Rolling 65-Degree Delta-Wing-Body Configuration. Lars E. Ericsson (**36**, 3, p. 489) Article based on AIAA Paper 97-3645 ISBN 1-56347-234-1

Samuel C. McIntosh Jr., *McIntosh Structural Dynamics, Inc.*; and Myles L. Baker, *The Boeing Company* (**36**, 4, p. 682) Article

C99-086 Boomerang Flight Mechanics: Unsteady Effects on Motion Characteristics. Manuela Battipede, *Politecnico di Torino, Italy* (**36**, 4, p. 689) Article based on AIAA Paper 97-3589 ISBN 1-56347-235-X

C99-087 Finite Element-Based Analytic Shape Sensitivities of Local and Global Airframe Buckling Constraints. Youngwon Shin and Eli Livne, *University of Washington* (**36**, 4, p. 697) Article

C99-088 Toward Cost-Effective Aeroelastic Analysis on Advanced Parallel Computing Systems. S. A. Goodwin, *Lockheed Martin Aeronautical Systems*; R. A. Weed, *Mississippi State University*; L. N. Sankar, *Georgia Institute of Technology*; and P. Raj, *Lockheed Martin Aeronautical Systems* (**36**, 4, p. 710) Article based on AIAA Paper 97-0646

C99-089 Divergence and Convergence of Iterative Static Aeroelastic Solutions. Thomas A. Zeiler, *University of Alabama* (**36**, 4, p. 716) Engineering Note

C99-090 Effect of a Splitter Plate on Transonic Wing Flow: A Numerical Study. G. Lombardi and M. V. Salvetti, *University of Pisa, Italy* (**36**, 4, p. 718) Engineering Note

C99-091 Spreadsheet Fluid Dynamics. Etsuo Morishita, *University of Tokyo, Japan* (**36**, 4, p. 720) Engineering Note

C99-092 In-Flight Skin Friction Measurements Using Oil Film Interferometry. Aaron Drake, *Washington State University, Tri-Cities*; and Robert A. Kennelly Jr., *NASA Ames Research Center* (**36**, 4, p. 723) Engineering Note

C99-093 Dynamic Unstructured Method for Relative Motion of Multibody Configuration at Hypersonic Speeds. Oktay Baysal and Xiaobing Luo, *Old Dominion University* (**36**, 4, p. 725) Engineering Note based on AIAA Paper 98-2412 ISBN 1-56347-268-6

C99-094 V-Tail Stalling at Combined Angles of Attack and Sideslip. Malcolm J. Abzug (**36**, 4, p. 729) Engineering Note

C99-095 Prediction of Laminar/Turbulent Transition in Airfoil Flows. Jeppe Johansen, *Risoe National Laboratory, Denmark*; and Jens N. Sørensen, *Technical University of Denmark* (**36**, 4, p. 731) Engineering Note based on AIAA Paper 98-0702

C99-096 Best-Range Altitude for Jet-Propelled Aircraft. Miguel Angel Gómez-Tierno, Juan José Martínez-García, and Manuel Pérez-Cortés, *Universidad Politécnica de Madrid, Spain* (**36**, 4, p. 734) Engineering Note

C99-097 Economic Life Determination for a Military Aircraft. John W. Lincoln, *Aeronautical Systems Center*; and Ronald A. Melliere, *The Boeing Company* (**36**, 5, p. 737) Article based on AIAA Paper 98-1828 ISBN 1-56347-265-1

C99-098 Coupling of Twin Supersonic Jets of Complex Geometry. Ganesh Raman, *DYNACS Engineering Company* (**36**, 5, p. 743) Article based on AIAA Paper 98-2973

C99-099 Mean Value Analysis of Military Airlift Operations at an Individual Airfield. Dennis C. Dietz, *Air Force Institute of Technology* (**36**, 5, p. 750) Article

C99-100 Aerodynamic and Performance Analysis of a Unique Semitailless Aircraft Configuration. Dudley E. Smith and Brian J. Tipton, *University of Oklahoma*; and Baxter R. Mullins Jr., *University of Texas at Arlington* (**36**, 5, p. 756) Article

C99-101 Method for Predicting the Rolling Resistance of Aircraft Tires in Dry Snow. Gerard W. H. van Es, *National Aerospace Laboratory/NLR, The Netherlands* (**36**, 5, p. 762) Article

C99-102 Hybrid Airfoil Design Procedure Validation for Full-Scale Ice Accretion Simulation. Farooq Saeed, Michael S. Selig, and Michael B. Bragg, *University of Illinois at Urbana–Champaign* (**36**, 5, p. 769) Article based on AIAA Paper 98-0199

C99-103 Minimizing Computational Data Requirements for Multi-Element Airfoils Using Neural Networks. Roxana M. Greenman and Karlin R. Roth, *NASA Ames Research Center* (**36**, 5, p. 777) Article based on AIAA Paper 99-0258

C99-104 Delay Exchanges in Arrival Sequencing and Scheduling. Gregory C. Carr and Heinz Erzberger, *NASA Ames Research Center*; and Frank Neuman, *Raytheon STX Corporation* (**36**, 5, p. 785) Article

C99-105 Prediction of Time-Correlated Gust Loads Using an Incremental Stochastic Search. K. Gilholm and G. H. Watson, *Defence Evaluation and Research Agency, England, UK* (**36**, 5, p. 792) Article

C99-106 Multiple-Body Trajectory Calculations Using the Beggar Code. Nathan C. Prewitt, *QuesTech, Inc.*; Davy M. Belk, *U.S. Air Force Research Laboratory*; and Raymond C. Maple, *U.S. Strategic Command* (**36**, 5, p. 802) Article

C99-107 Simple Description of Airflow Characteristics Inside an Unfolding Parachute. Jean Potvin, *Saint Louis University* (**36**, 5, p. 809) Article

C99-108 Optimization of Six-Degrees-of-Freedom Motion Systems for Flight Simulators. S. K. Advani, M. A. Nahon, N. Haeck, and J. Albronda, *Delft University of Technology, The Netherlands* (**36**, 5, p. 819) Article

C99-109 Validation Methods and Results for a Two-Dimensional Ice Accretion Code. William B. Wright, *DYNACS Engineering Company* (**36**, 5, p. 827) Article

C99-110 Computational Investigation of Simulated Large-Droplet Ice Shapes on Airfoil Aerodynamics. Timothy A. Dunn, Eric Loth, and Michael B. Bragg, *University of Illinois at Urbana–Champaign* (**36**, 5, p. 836) Article

C99-111 Experimental Investigation of Simulated Large-Droplet Ice Shapes on Airfoil Aerodynamics. Sam Lee and Michael B. Bragg, *University of Illinois at Urbana–Champaign* (**36**, 5, p. 844) Article

C99-112 Nonlinear Equivalent Plate Modeling of Wing-Box Structures. Eli Livne and Israel Navarro, *University of Washington* (**36**, 5, p. 851) Article

C99-113 Full Validation of the Structural–Acoustic Response of a Simple Enclosure. S. De Rosa, F. Franco, F. Marulo, F. Conicella, and G. Esposito, *University of Naples "Federico II," Italy* (**36**, 5, p. 866) Article

C99-114 Review of the NASA Textile Composites Research. C. C. Poe Jr., H. B. Dexter, and I. S. Raju, *NASA Langley Research Center* (**36**, 5, p. 876) Article based on AIAA Paper 97-1321 ISBN 1-56347-227-9

C99-057 **Nonlinear Response of Vortex Breakdown over a Pitching Delta Wing.** Matthew Menke and Ismet Gursul, *University of Cincinnati* (**36**, 3, p. 496) Article

C99-058 **Reduction of Fuselage Form Drag by Vortex Flows.** Andrzej Wortman (**36**, 3, p. 501) Article

C99-059 **Freestream Disturbance Effects on an Airfoil Pitching at Constant Rate.** Jerry M. Chen and Chih-Chung Choa, *National Chung-Hsing University, Taiwan, ROC* (**36**, 3, p. 507) Article

C99-060 **Lift Prediction of Spanwise Cambered Delta Wings.** Lance W. Traub, *Texas A&M University* (**36**, 3, p. 515) Article

C99-061 **Rigid and Flexible Low Reynolds Number Airfoils.** Wei Shyy, Fredrik Klevebring, Mikael Nilsson, Jason Sloan, Bruce Carroll, and Carlos Fuentes, *University of Florida* (**36**, 3, p. 523) Article

C99-062 **Unsteady Aerodynamic Characteristics of Airfoil with Moving Spoilers.** C. Xu and W. W. H. Yeung, *Nanyang Technological University, Singapore* (**36**, 3, p. 530) Article

C99-063 **Fault-Tolerant Neural Network Algorithm for Flush Air Data Sensing.** Thomas J. Rohloff, *University of California, Los Angeles*; Stephen A. Whitmore, *NASA Ames—Dryden Flight Research Center*; and Ivan Catton, *University of California, Los Angeles* (**36**, 3, p. 541) Article

C99-064 **Investigation of Confluent Boundary Layers in High-Lift Flows.** Susan X. Ying, *The Boeing Company;* Frank W. Spaid, *The Boeing Company*; and Catherine B. McGinley and Christopher L. Rumsey, *NASA Langley Research Center* (**36**, 3, p. 550) Article based on AIAA Paper 98-2622 ISBN 1-56347-268-6

C99-065 **Design Minimization of Noise in Stiffened Cylinders Due to Tonal External Excitation.** Kenneth A. Cunefare and Scott P. Crane, *Georgia Institute of Technology*; and Stephen P. Engelstad and Eugene A. Powell, *Lockheed Martin Aeronautical Systems Company* (**36**, 3, p. 563) Article based on AIAA Paper 96-1702

C99-066 **Fault Tolerance and Extrapolation Stability of a Neural Network Air-Data Estimator.** Thomas J. Rohloff and Ivan Catton, *University of California, Los Angeles* (**36**, 3, p. 571) Article

C99-067 **Turbulence Intensity Measurement Technique for Use in Icing Wind Tunnels.** Chad M. Henze and Michael B. Bragg, *University of Illinois at Urbana–Champaign* (**36**, 3, p. 577) Article

C99-068 **Directional Stability and Control During Landing Rollout.** Malcolm J. Abzug (**36**, 3, p. 584) Article

C99-069 **Trim and Floor Influence on Vibrational Response of an Aircraft Fuselage Model.** Sylvain Nadeau and Yvan Champoux, *Université de Sherbrooke, Canada*; and Luc Mongeau, *Purdue University* (**36**, 3, p. 591) Article

C99-070 **Structural Response of Composite Sandwich Panels Impacted With and Without Compression Loading.** David M. McGowan and Damodar R. Ambur, *NASA Langley Research Center* (**36**, 3, p. 596) Article based on AIAA Paper 98-1783 ISBN 1-56347-265-1

C99-071 **Dynamic Stall of Pitching Airfoils and Delta Wings, Similarities and Differences.** Lars E. Ericsson (**36**, 3, p. 603) Engineering Note based on AIAA Paper 98-0414

C99-072 **Inverse Design of Supersonic Airfoils Using Integral Equations.** Shinkyu Jeong, *Tohoku University, Japan*; Kisa Matsushima, *Fujitsu Laboratories, Ltd., Japan*; Toshiyuki Iwamiya, *National Aerospace Laboratory, Japan*; and Shigeru Obayashi and Kazuhiro Nakahashi, *Tohoku University, Japan* (**36**, 3, p. 606) Engineering Note

C99-073 **New Technique for Preventing Payload-Airbag Overtipping.** Zhimin Xie, Zhimin Wan, and Xingwen Du, *Harbin Institute of Technology, PRC* (**36**, 3, p. 608) Engineering Note

C99-074 **Application of the Subsonic Doublet Lattice Method to Delta Wings.** Louw H. van Zyl, *Aerotek, CSIR, South Africa* (**36**, 3, p. 609) Engineering Note

C99-075 **Improvement to Numerical Predictions of Aerodynamic Flows Using Experimental Data Assimilation.** G. Barakos, D. Drikakis, and W. Lefebre, *UMIST, England, UK* (**36**, 3, p. 611) Engineering Note

Errata (**36**, 4, p. 736)

C99-076 **Computational Simulation of the F-22 Aircraft.** Eswar Josyula and Raymond E. Gordnier, *U.S. Air Force Research Laboratory* (**36**, 3, p. 614) Engineering Note based on AIAA Paper 98-0526

C99-077 **Development of Low-Cost Differential Global Positioning System for Remotely Piloted Vehicles.** Wen-Lin Guan, Fei-Bin Hsiao, and Ching-Shun Ho, *National Cheng-Kung University, Taiwan, ROC*; and Jiann-Min Huang, *Chung Shan Institute of Science and Technology, Taiwan, ROC* (**36**, 4, p. 617) Article

C99-078 **Automatic Target Recognition Directed Image Compression.** Charles D. Creusere and Alan Van Nevel, *U.S. Naval Air Warfare Center* (**36**, 4, p. 626) Article

C99-079 **Decision Theoretical Approach to Pilot Simulation.** Kai Virtanen, Tuomas Raivio, and Raimo P. Hämäläinen, *Helsinki University of Technology, Finland* (**36**, 4, p. 632) Article based on AIAA Paper 98-4537 ISBN 1-56347-271-6

C99-080 **Cost-Effective Multipoint Design of a Blended High-Speed Civil Transport.** Natasha E. Sevant, Malcolm I. G. Bloor, and Michael J. Wilson, *University of Leeds, England, UK* (**36**, 4, p. 642) Article based on AIAA Paper 98-2785 ISBN 1-56347-268-6

C99-081 **Effects of Leading- and Trailing-Edge Gurney Flaps on a Delta Wing.** Lance W. Traub and Samuel F. Galls, *Texas A&M University* (**36**, 4, p. 651) Article

C99-082 **Prediction of Vortex Breakdown in Leading-Edge Vortices Above Slender Delta Wings.** Z. Rusak and D. Lamb, *Rensselaer Polytechnic Institute* (**36**, 4, p. 659) Article

C99-083 **Numerical Optimization of Fuselage Geometry to Modify Sonic-Boom Signature.** Yoshikazu Makino, Takashi Aoyama, and Toshiyuki Iwamiya, *National Aerospace Laboratory, Japan*; and Tadaharu Watanuki and Hirotoshi Kubota, *University of Tokyo, Japan* (**36**, 4, p. 668) Article

C99-084 **Airfoil Drag Prediction and Decomposition.** D. D. Chao and C. P. van Dam, *University of California, Davis* (**36**, 4, p. 675) Article based on AIAA Paper 98-2783 ISBN 1-56347-268-6

C99-085 **Further Convergence Studies of the Enhanced Doublet-Lattice Method.** William P. Rodden, *William P. Rodden, Ph.D., Inc.*; Paul F. Taylor, *Gulfstream Aerospace Corporation*;

C99-115 Effect of Nose Slenderness on Forebody Flow Control. Lars E. Ericsson; and Martin E. Beyers, *Institute for Aerospace Research, Canada* (**36**, 5, p. 885) Article based on AIAA Paper 98-0499

C99-116 Drag Reduction Due to Riblets on a GAW(2) Airfoil. N. Subaschandar, Rajeev Kumar, and S. Sundaram, *National Aerospace Laboratories, India* (**36**, 5, p. 890) Engineering Note

C99-117 Theodorsen's Propeller Performance with Rollup and Swirl in the Slipstream. Gerrit Schouten, *Delft University of Technology, The Netherlands* (**36**, 5, p. 892) Engineering Note

C99-118 Equivalence Between Sideslip and Roll in Wind-Tunnel Model Testing. S. Tavoularis, *University of Ottawa, Canada* (**36**, 5, p. 895) Engineering Note

C99-119 Acceleration Effect on the Stanton Number for Castings of Ice-Roughened Surfaces. Nihad Dukhan, K. C. Masiulaniec, and Kenneth J. De Witt, *University of Toledo*; and G. James Van Fossen Jr., *NASA John H. Glenn Research Center at Lewis Field* (**36**, 5, p. 896) Engineering Note based on AIAA Paper 96-0867

C99-120 Unified Model Deformation and Flow Transition Measurements. Alpheus W. Burner, *NASA Langley Research Center*; Tianshu Liu and Sanjay Garg, *High Technology Corporation*; and James H. Bell and Daniel G. Morgan, *NASA Ames Research Center* (**36**, 5, p. 898) Engineering Note

C99-121 Influence of Separated Wing Flow on Tail Downwash of Low-Wing Pusher Configuration. K. Karthik, E. G. Tulapurkara, and K. A. Damodaran, *Indian Institute of Technology* (**36**, 5, p. 902) Engineering Note

C99-122 Manual Aerodynamic Optimization of an Oblique Wing Supersonic Transport. Pei Li, *The Boeing Company*; Helmut Sobieczky, *DLR, German Aerospace Center*; and Richard Seebass, *University of Colorado* (**36**, 6, p. 907) Article based on AIAA Paper 98-0598

C99-123 Wood to Metal: The Structural Origins of the Modern Airplane. Peter L. Jakab, *National Air and Space Museum, Smithsonian Institution* (**36**, 6, p. 914) Article

C99-124 Technique for Unique Optimization of Dynamic Finite Element Models. Shane A. Dunn, *Defence Science and Technology Organisation, Australia* (**36**, 6, p. 919) Article

C99-125 Estimating Aerodynamic Characteristics of Automatic Landing Flight Experiment Vehicle Using Flight Data. Masaaki Yanagihara and Masashi Shigemi, *National Aerospace Laboratory, Japan*; and Takanobu Suito, *National Space Development Agency, Japan* (**36**, 6, p. 926) Article based on AIAA Paper 97-3485 ISBN 1-56347-235-X

C99-126 Comparison of Multidisciplinary Design Optimization Codes for Conceptual and Preliminary Wing Design.- Richard Butler, *University of Bath, England, UK*; Erik Hansson, *Saab AB, Sweden*; Mark Lillico, *University of Bath, England, UK*; and Frank Van Dalen, *Delft University of Technology, The Netherlands* (**36**, 6, p. 934) Article based on AIAA Paper 98-4857 ISBN 1-56347-273-2

C99-127 Multipoint Inverse Design Method for Transonic Wings. Hyoung-Jin Kim, Chongam Kim, and Oh-Hyun Rho, *Seoul National University, Korea* (**36**, 6, p. 941) Article

C99-128 Experimental Heat Transfer Coefficients from Ice-Roughened Surfaces for Aircraft Deicing Design. Nihad Dukhan, K. C. Masiulaniec, and Kenneth J. De Witt, *University of Toledo*; and G. James Van Fossen Jr., *John H. Glenn Research Center at Lewis Field* (**36**, 6, p. 948) Article based on AIAA Paper 96-0867

C99-129 Transonic Similarity Theory Applied to a Supercritical Airfoil in Heavy Gas. J. B. Anders and W. K. Anderson, *NASA Langley Research Center*; and A. V. Murthy, *Aerotech, Inc.* (**36**, 6, p. 957) Article based on AIAA Paper 98-2882

C99-130 Effects of Freestream Turbulence on Wing-Surface Flow and Aerodynamic Performance. Rong F. Huang and Han W. Lee, *National Taiwan University of Science and Technology, Taiwan, ROC* (**36**, 6, p. 965) Article

C99-131 Development of a Fully Systemized Chimera Methodology for Steady/Unsteady Problems. Kum Won Cho and Jang Hyuk Kwon, *Korea Advanced Institute of Science and Technology*; and Seungsoo Lee, *Agency for Defence Development, Korea* (**36**, 6, p. 973) Article

C99-132 Aileron Effectiveness at High Angles of Attack: Interaction with Forebody Blowing. Nelson Pedreiro, Yuji Takahara, and Stephan M. Rock, *Stanford University* (**36**, 6, p. 981) Article based on AIAA Paper 98-4518 ISBN 1-56347-270-8

C99-133 Large-Scale Parallel Unstructured Mesh Computations for Three-Dimensional High-Lift Analysis. D. J. Mavriplis and S. Pirzadeh, *NASA Langley Research Center* (**36**, 6, p. 987) Article

C99-134 Anti-Icing System Simulation Using CANICE. François Morency, *École Polytechnique de Montréal, Canada*; Fatih Tezok, *Bombardier Aerospace, Canada*; and Ion Paraschivoiu, *École Polytechnique de Montréal, Canada* (**36**, 6, p. 999) Article based on AIAA Paper 98-0192

C99-135 Structural Optimization of Flight Vehicles with Computational-Fluid-Dynamics–Based Maneuver Loads. Daniella E. Raveh and Mordechay Karpel, *Technion—Israel Institute of Technology* (**36**, 6, p. 1007) Article based on AIAA Paper 98-4832 ISBN 1-56347-273-2

C99-136 Characterization of Fatigue Behavior of Bonded Composite Repairs. John Klug, Scott Maley, and C. T. Sun, *Purdue University* (**36**, 6, p. 1016) Article

C99-137 Active Control of Structure-Borne and Airborne Sound Transmission Through Double Panel. Paolo Gardonio and Stephen John Elliott, *University of Southampton, England, UK* (**36**, 6, p. 1023) Article based on AIAA Paper 98-2353 ISBN 1-56347-267-8

C99-138 Measurements of Unsteady Aeroelastic Model Deformation by Stereo Photogrammetry. Edward T. Schairer and Lawrence A. Hand, *NASA Ames Research Center* (**36**, 6, p. 1033) Article based on AIAA Paper 97-2217 ISBN 1-56347-232-5

C99-139 Aeroelastic Tailoring of Composite Structures. F. E. Eastep, *University of Dayton*; and V. A. Tischler, V. B. Venkayya, and N. S. Khot, *U.S. Air Force Research Laboratory* (**36**, 6, p. 1041) Article

C99-140 Parametric Study of the Behavior of Graphite/Epoxy Panels with Stiffener Terminations. Dawn C. Jegley, *NASA Langley Research Center* (**36**, 6, p. 1048) Article based on AIAA Paper 99-1407

C99-141 **Effects of Wing-Tip Strakes on a Sheared-Tip Wing.** Lance W. Traub, Samuel F. Galls, and Othon Rediniotis, *Texas A&M University* (**36**, 6, p. 1055) Article

C99-142 **Dynamic Thrust Offset Effects and Flying Qualities Implications.** G. Sachs, *Technische Universität München, Germany* (**36**, 6, p. 1063) Engineering Note
